SUMMARY

I am a motivated and enthusiastic B.Tech graduate with a strong foundation in Java programming and a genuine passion for building efficient, scalable, and maintainable software solutions. Having invested significant time in mastering core Java concepts, object-oriented programming, data structures, and software development principles throughout my academic journey, I am now eager to step into a professional environment where I can apply this knowledge to real-world challenges.

EDUCATION

B.TECH in Computer Science Engineering (Data Science) , Avanthi Institue of Engineering and Technology (GPA: 8.0)	2026
Intermediate in MPC , Narayana Junior college (GPA: 8.5)	2022
SSC , Sri Sivananda High School (GPA: 9.0)	2020

EXPERIENCE

Internship AIMER Society - Artificial Intelligence Medical and Engineering Researchers Society • Expanded chat bot using AI that generate images. - Enhanced Object Detection . - Boosted chat bot using AI that generate images. • Dashboard developed using Power bi	2024
---	------

Full Stack web development Agnirva - Contributed to Full Stack development projects, focusing on frontend design using HTML, CSS, JavaScript, and React.js to enhance user experience. - Architected a full-stack chatbot solution by integrating machine learning models for natural language processing, enabling automated and intelligent user interactions.	2025
--	------

SKILLS

Programming Languages	Java,Python
Front-End Technologies	HTML, CSS
Core Java	OOP, Collections Framework, Exception Handling, Multithreading, File Handling
Database	MongoDB, MySQL
Tools & version control	Git, GitHub, VS Code, Jupyter Notebook
Methodologies	SDLC,Agile
Soft Skills	Management, Versatile, Teamwork and Leadership, Continuous Learning

PROJECTS

Supermarket Bill Generation System Mini Project Github
Developed an interactive Supermarket Billing Application in Python utilizing nested control-flow logic (while loops) and dictionary data structures to automate item selection, price mapping, and cart management. Engineered robust input validation and receipt generation to dynamically track item quantities, reject invalid entries, calculate automated tax algorithms, and produce formatted invoices.
SQL Injection Detection using ML Python, Scikit-learn Github
- Developed ML classifier to identify SQLi attacks from HTTP requests with 96% accuracy using TF-IDF and SVM. Built Flask API for real-time query scanning. - Algorithms Used: Logistic Regression, Naive Bayes, Random Forest Classifier Each algorithm is trained on the dataset, and performance is compared using evaluation metrics. - System Architecture: Dataset from Kaggle dataset Preprocessing: normalization, noise removal. Feature Extraction: Relevant features extracted from dataset. Model Training: Supervised ML algorithms trained on labeled data. Prediction: SQL Injection Attacks detection on the payload. Evaluation: Accuracy and performance metrics calculated

CERTIFICATIONS

Python Data Science AI development.	June 2025
Certified Python Programmer From Basic to Advanced Level By-PYTHON LIFE Organisation	Sept 2025
Full Stack Development-SMART BRIDGE	2025
Enrolled in Java full stack Deveploment Programming at Nirmaan Organisation-Ongoing	2026
